

DIGITAL INFRASTRUCTURE

DATA GOVERNANCE

ESG

Dark Data Composting Platform

Turning enterprise data waste into an auditable ESG action.

THE CHALLENGE

Stored data has a hidden footprint — on ecosystems, on humans, on the public ledger.

~1.5%

of global electricity used by data centres in 2024
— projected to ~double by 2030.

billions of L

of water withdrawn per year by hyperscale sites —
increasingly in water-stressed regions.

€5.88B

in cumulative GDPR fines since 2018 — retention is
now a legal liability.

MAGNITUDE

Most of what we store is never used.

USED

NEVER ACCESSED

Sub-group: dark & ROT data inside enterprise cloud storage.

Sector — digital economy

Sub-sector — digital infrastructure & cloud

Cloud storage & data governance

Unstructured enterprise data

Dark / ROT data ← our sub-group

Selected: largest waste volume · steepest AI-driven growth · only layer regulators & energy grids are actively pricing.

AI hoarding

Teams keep everything in case a model wants it.

EU Data Act + CSRD

Data-lifecycle & Scope-3 disclosure mandated.

IEA energy alerts

Data-centre electricity ~doubles by 2030.

FinOps maturity

Cloud storage spend now has a CFO owner.

UNMET NEED No tool today scores a single dataset in **\$ + kgCO₂e + legal risk** and then executes **auditable deletion**. Status quo: retain forever.

UNMET NEED

Companies are afraid to delete — even data with no business value.

No owner

Compliance fear

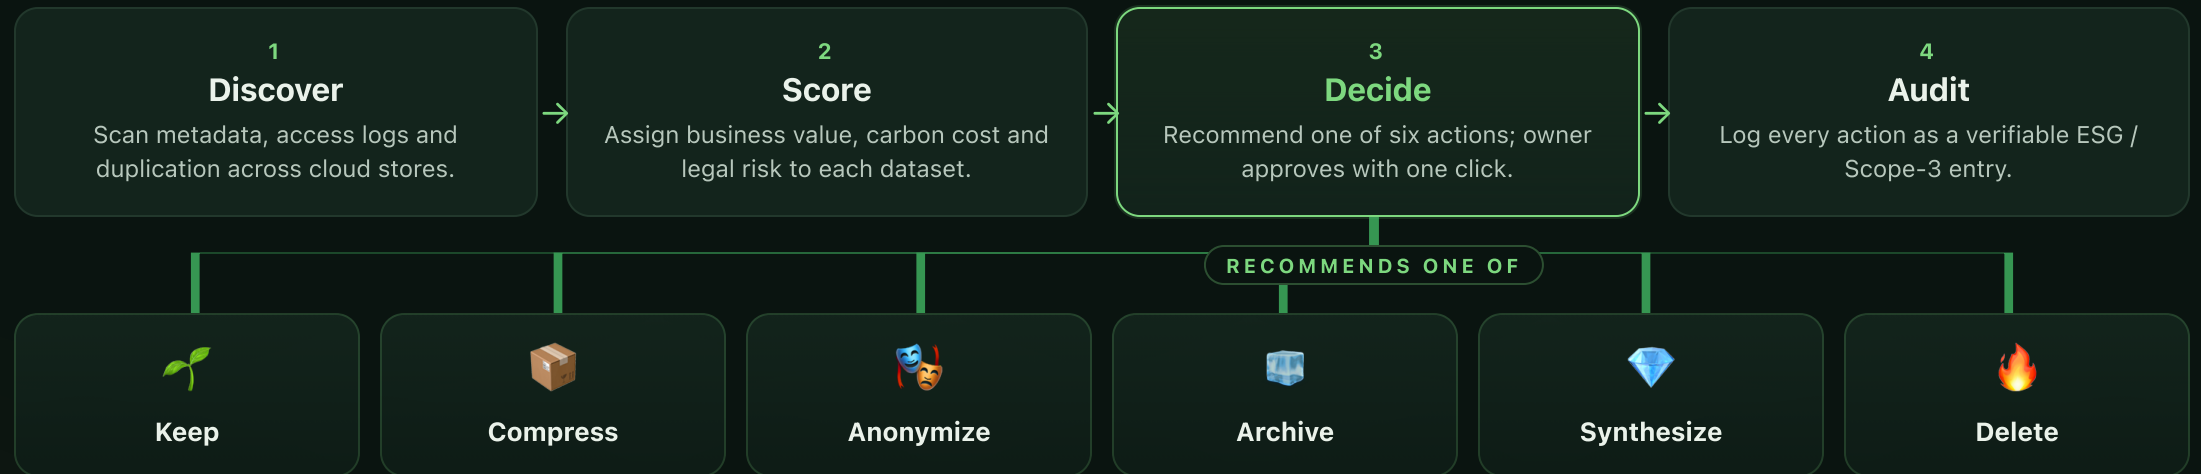

AI hoarding

No tooling

SOLUTION

A composting layer that scores every dataset and routes it to the right end-of-life action.

We don't sell storage. We sell auditable deletion.

	STATUS QUO	DATA COMPOSTING
Decision unit	Storage tier	Individual dataset
Optimises for	\$ / GB	\$ + kgCO ₂ e + legal risk
Default	Retain forever	Compost on schedule
Auditability	Bills only	ESG-grade ledger
Vendor incentive	Sell more storage	Reduce storage

TARGET MARKET

Regulated, cloud-heavy enterprises — EU first, three-office sale.

WHO

**Enterprises
> \$1B revenue**

> 1 PB CLOUD STORAGE

FINANCE · TELCO · HEALTH

HAS CSO & DPO

WHERE

**EU first
then UK & US**

CSRD (EU)

GDPR · DORA

SEC CLIMATE RULE

BUYER

**CIO + CSO + DPO
triple sign-off**

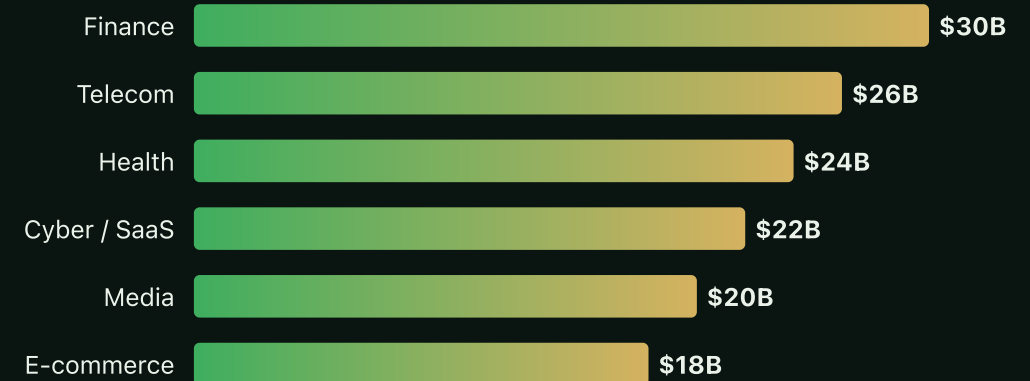

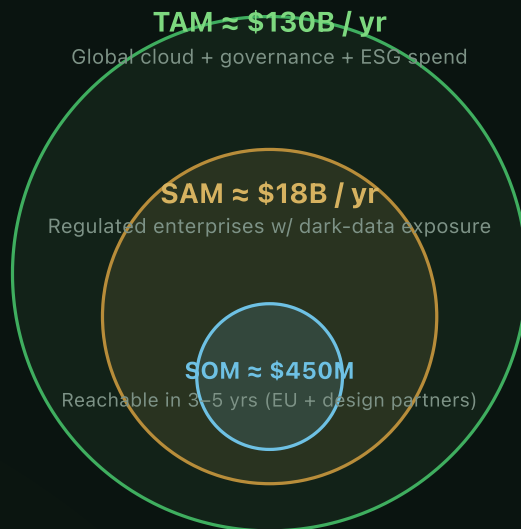

COST · CIO

CARBON · CSO

LEGAL · DPO

MARKET

A ~\$130B space at the intersection of cloud, governance and ESG.

Cloud spend × dark-data share × regulation

COMPETITION

Five capabilities. Only one platform covers all five.

CATEGORY	SCAN DARK DATA	PRICE ITS VALUE	CARBON ACCOUNTING	LEGAL & COMPLIANCE	AUDITABLE DELETION	COVERAGE
Dark Data Composting Us	✓	✓	✓	✓	✓	5 / 5
Hyperscaler storage AWS S3 · GCS · Azure Blob	✗	✗	◐	◐	✗	0 / 5
Data platforms Snowflake · Databricks	◐	✗	✗	✗	✗	0 / 5
Backup & protection Rubrik · Veeam · Cohesity	◐	✗	✗	◐	✗	0 / 5
Catalog & governance Collibra · Informatica · Atlan	✓	✗	✗	◐	✗	1 / 5
FinOps Flexera · Apptio · Turbonomic	◐	◐	✗	✗	✗	0 / 5
Sustainability Watershed · Persefoni	✗	✗	✓	✗	✗	1 / 5

FEASIBILITY & ROADMAP

The data, the carbon factors, the regulation and the buyers are already in place.

YEAR 1

Pilot

3 EU design partners · AWS only

YEAR 2

Multi-cloud

GCP & Azure · SOC 2 / ISO 27001

YEAR 3

Marketplace

Synthetic-insight exchange · carbon credits

YEAR 5

Standard

Industry "compostable data" disclosure
